Grant X. Storer

January 24, 2024

1 Citations and References

Today is a beautiful day. But tomorrow may not be (Storer, 2023). Figure 1 is a pdf version of the MPG graph, meanwhile we can also see this same graph in png format in Figure 2. These graphs display prices of domestic¹ & foreign vehicles.²

The fourth table in document, but the 2nd table with a title (table 2), has footnotes with a fixed width.

2 Environments

Test: Create a numbered set.

1. part 1
2. part 3
3. part 2 (test that we can put anything here, even when the order is manually written wrong here, the numbered order remains).

2.1 Simple Table & Equation

1	2
3	4

$$y_{i,m} = \alpha_0 + \beta T_i + \gamma S[m \in \{4, 5, 6\}] + \theta T_i S[m \in \{4, 5, 6\}] + \tau_i + \epsilon_{i,m} \quad (1)$$

Equation 1 is a Diff-in-Diff that is not easy to understand.

¹"Domestic" is referring to U.S. made vehicles.

²See appendix at end of paper.

3 figures

Figure 2: mpg

png version

4 tables

6072.423	3097.104
6384.682	2621.915

	Mean	SD
Domestic	6072.423	3097.104
Foreign	6384.682	2621.915

Table 1: Car prices: Domestic vs. Foreign

	Mean	SD
Domestic	6072.423	3097.104
Foreign	6384.682	2621.915

Prices in USD.

Table 2: Car prices: Domestic vs. Foreign

	Mean	SD
Domestic	6072.423	3097.104
Foreign	6384.682	2621.915

Prices in USD. This is a test to see what happens when I write a very lengthy footnote without any breaks. Does it stretch out beyond the table, or does it wrap down to a new row?

Table 3: Car prices: Domestic vs. Foreign

	Mean	SD
Domestic	6072.423	3097.104
Foreign	6384.682	2621.915

Prices in USD. This is a test to see what happens when I write a very lengthy footnote without any breaks. Does it stretch out beyond the table, or does it wrap down to a new row?

5 conclusion

As stated in footnote 1, U.S. is the reference country in this study. See also Footnote 2.
