1 Template Sample

Delete Template Sample section (lines 56-89) once ready for writing paper draft.
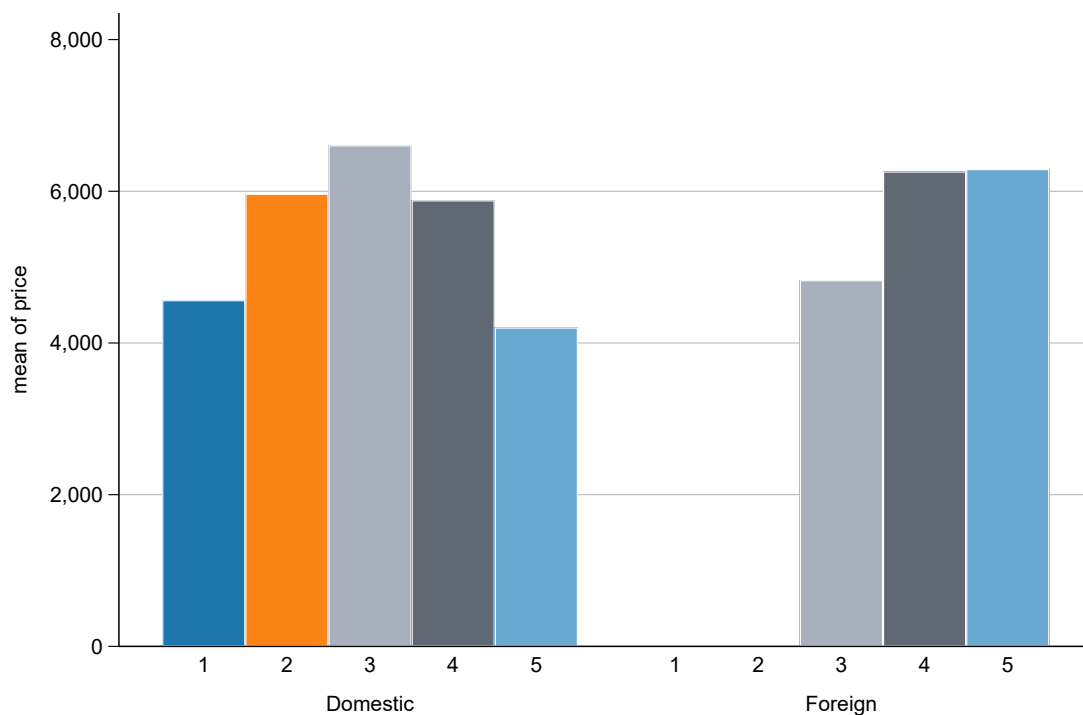

1.1 Figures

Figures are stored in the "outputs" folder. Do-File should export three formats of each figure and are stored in the following "figures" subfolders:

- **eps** (best for printing)

- **pdf** (best overall format)

- **png** (best for images)

Use the following command to import figure to paper:

Figure 1: Replace Me with Figure Title

1.2 Tables

Like with Figures, Do-file stores tables in the "tables" subfolder of "outputs." Use the following command to include a table into paper:

Table 1: Car prices: Domestic vs. Foreign

	Mean	SD
Domestic	6072.423	3097.104
Foreign	6384.682	2621.915

Prices in USD. This is a test to see what happens when I write a very lengthy footnote without any breaks. Does it stretch out beyond the table, or does it wrap down to a new row?

1.3 Citations and References

Citation test (Storer, 2023). Figure 1 is a pdf version of the MPG graph, meanwhile we can also see this same graph in png format if we change the path name and extension name to "png." This graph displays prices of domestic[1] & foreign vehicles, by number of repairs.

2 Introduction

Replace Me with Introduction
